The SUMIF function is case-insensitive if you are looking for a sumif case-sensitive formula that can differentiate between uppercase and lower characters, use SUMIF in combination with Arrayformula and find as shown in this example. Criterion (required) - The conditions to be met. Sum ,range (optional) - The interval in which to add the numbers. Today we will look closer to one of such functions - SUMIF - a powerful tool for adding cells conditionally. SUMIF can only evaluate a condition the syntax of the SUMIF function allows only an interval, a criterion and a sum ,range. For example, to add the amounts in column B whose quantity in column C is equal to 10, use any of the under formulas: = SUMIF (C5: C13, 10, B5: B13) or = SUMIF (C5: C13 " 10 ", B5: B13) O = SUMIF (C5: C13, B1, B5: B13) in which B1 is the cell with the quantity required. In our example, to add the amounts in column B that have any quantity except 10 in column C, go with one of these formulas: = SUMIF (C5: C13, " 10", B5: B13) = SUMIF (C5: C13, "" & B1, B5: B13) The screenshot shows the result: to sum the values conditionally based on the date criteria, we also use comparison operators as shown in the examples indicated above. Asterisk (*) to match any character sequence. To make the examples easier to follow, I invite you to open our SMIF Google Sheet sample. But don't run to close this page - you may find some non-obvious sumif formulas but very helpful you don't know! SUMIF In Google Sheets - Syntax and Basic Uses The SUMIF function is Google Sheets is designed to add numerical data based on a condition. The key point is that a date should be provided in the format that Google sheets can ad ad atinited "À etnenamir aera1 ,eremussair ad ollavretni'iled artinsis a ota ni "Aip allec al otos acificeps egnar mus otnemugra1 ,ittafni egnar mus e'etnemlaugu inoismemid id ollavretni nu erimroF dimensionì dell'argomento dell'intervallo. Ora, come si ottiene un totale di tutti gli elementi tranne le banane? For instance, to sum amounts in B5:B13 for delivery dates prior to 11-Mar-2018, build the criterion in one of these ways: =SUMIF(C5:C13, "<11/03/2018", B5:B13) "01A:2A(FIMUS=(10B:2B)"*" ,01A:2A(FIMUS=(01B:2B), "selppa" ,01A:2A(FIMUS= :elpmaxeF02A(FIMUS=:elpmaxeF), detsetretneb oslaUoYkeexen ruo isaislaug a erednopsiroc eved)?(ovitagorretni otnup fi ,airetiric ien yloj irettarac itneuges ied onu eredulcni ,allec allec otunetnoc led etrap emoc ocificeps erettarac nu o otset nu eneitnoc annoloc arla'nu id allec anu es annoloc anu id ellec el eramos aredised is iuc ni inoizautis elleN jelaizrap aznednopsirroct yloj irettarac noc FIMUS elumroF ,FIMUS alumrof allen otornroc id irotarepo ilged onu erazzilitu ,enoizidnoc ataniretred anu onafsiddos ehc iremun eramos reP iremun rep FIMUS elumroF lottaF .2 ,ollavretni'1 otammos enoiv ,ossemo eS ,amelborp nu ecsiutisoc non otairporppa erotarepo nu id atlecs al ,isac led etrap roiggam alleN .3 , "ecnara" o "elem" a elaugu "À A annoloc al es B annoloc allen irolav onognuigga is ,oipmese otseuq ni ,orez azzehgnal id ehgnirts el esulcni ,erolav isaislaug onognetnoc ehc ellec el eramos rep "> 200") Please note the correct criterion syntax: a set number with a comparison operator and the entire construction enclosed in quotation quotation Google Sheets SUMIF - things to remember Now that you know the nuts and bolts of the SUMIF function in Google Sheets, it can be a good idea to make a brief summary of what you've already learned. For example, to sum the amounts for which "À" set the delivery date (a cell in column C is not "À" blank), use the following formula: =SUMIF(C5:C13, "", B5:B13) To get a total of the amounts without delivery date (a cell in column C "À" blank), use this: =SUMIF(C5:C13, "", B5:B13) Google Sheets SUMIF with multiple criteria (LOGICA OR) The SUMIF function in Google Sheets "À" designed to sum values based on one criterion. Therefore, even if you incorrectly provide a wrong sum ,range, Google Sheets will calculate however, the formula on the right, provided the upper-left cell of sum ,range is correct. For example, =SUMIF (A5:A13, ""&B1, B5:B13) The following screen shot shows both the formula "Sum if equal" and the formula "Sum if not equal" in action: Please note that SUMIF in Google Sheets searches for exactly the specified text. 1. To force it to treat uppercase and lowercase characters differently, use SUMIF in combination with the FIND and ARRAYFORMULA functions: SUMIF(ARRAYFORMULA(FIND("text", range)), 1, sum ,range) Assuming you have a list of order numbers in A5:A13 and the corresponding amounts in C5:C13, where the same order number appears in multiple rows. This example adds up only the amounts for bananas, but does not include green and Goldfinger bananas. Some of Google Sheets' best features are those that help you summarize and categorize your data. To add more" criteria, "À" you can add two or more" SUMIF functions together. To search within a range, "À" requires an array formula to nest FIND within ARRAYFORMULA.
